

Spinning Around and Around and Around

Making a "simple" tourbillon is, with certain exceptions, no longer enough to garner headlines or catch the eye of serious collectors. So the Swiss watch brand, Blu opted to take things a step or two further by creating the Blu Majesty MT3. The watch includes an intricate system of three corresponding tourbillons, each with individual turning speeds.

Unveiled during Baselworld 2007, the MT3 has a "semi-flying" minute tourbillon mounted upon the cage of the hour tourbillon, which in turn is carried around the dial on a large 12-hour tourbillon.

Company founder, Bernhard Lederer, was pleased with the recognition the watch generated at the Malaysian watch fair, A Journey Through Time, where it was awarded "The Malaysia Most Wanted Watch 2007" first place. A handsome acknowledgement and one that came days after the opening of the new Blu Boutique, in the nations capital of Kuala Lumpur.
